Professional Experience

Software Engineer, Pakistan Single Window (PSW)

03/2024 – present

- Built a role-based announcement service using **.NET Core, SignalR, and SQL Server**, delivering real-time notifications to 100K+ users.
- Implemented workflow-driven document routing using **.NET Core Worker Service, Workflow Engine, and SQL Server**, automating approvals, reducing manual processing by 90%, and cutting turnaround time by 70%.
- Designed a distributed transaction mechanism across **.NET microservices**, persisting execution checkpoints to ensure consistency and reducing debugging effort by 60%.
- Provided L3 production support in a **.NET microservices environment with SQL Server and RabbitMQ**, resolving critical issues and maintaining high availability.
- Implemented authentication and authorization using **IdentityServer4, OpenID Connect, and JWT policies**, enforcing access control and securing APIs.
- Configured **RabbitMQ Dead Letter Queues (DLQ)** with retry handling, reducing message loss by 90% and improving reliability.
- Developed external integration via **Ocelot API Gateway and .NET Core REST services**, enabling interoperability between distributed systems.

Software Engineer, BailsSoft

12/2022 – 02/2024

- Developed RESTful APIs and **SQL Server Stored Procedures (.NET)** to generate analytics datasets, improving reporting performance by 40%.
- Built responsive frontend components using **DevExtreme and HTML5**, optimizing rendering and reducing load times by 35%.
- Implemented custom authorization middleware in **.NET** to enforce RBAC and secure protected endpoints.
- Contributed to a multi-tenant **SaaS fintech platform (.NET, SQL Server)** in an Agile environment, enhancing core modules and system scalability for 6+ clients.

Projects

Requirement Traceability & Impact Analysis Tool

Developed a CLI-based analysis tool using **.NET, C#, Roslyn, and Git CLI** to map requirements to commits, files, and methods across repositories. Implemented static code analysis, hotspot detection, and automated report generation (HTML/JSON/CSV) to identify high risk areas and dependency impact. [GitHub Repo]

External Party Bridge System

EPB enables secure and reliable communication between two systems, with comprehensive logging, retry mechanisms, and fault handling to ensure consistent and accurate data exchange. Built using **.NET Core and SQL Server**, designed to handle high-volume transactions efficiently.

Automated Attendance System

Eliminated missed employee check-ins by automating attendance based on office entry during work hours, improving attendance accuracy, reducing administrative overhead, and ensuring consistent compliance without requiring manual action from employees. [GitHub Repo]

Education

Bachelor of Computer Science, UBIT, University of Karachi

2020 – 2023

Certificates

Microsoft Certified: Azure Fundamentals

Credential ID: 19094B79B3B22636

Certification number: EFC84A 48EA5C

Skills

Frameworks & Languages

- C#
- .NET / .NET Core
- ASP.NET MVC
- Web API
- Entity Framework Core
- ADO.NET
- Dapper
- LINQ

APIs & Gateways

- RESTful APIs
- Ocelot API Gateway

Database

- MS SQL Server

Frontend Technologies

- React Js
- HTML5
- DevExtreme Library

System Design

- Microservices
- RabbitMQ
- Design Patterns (Repository, Factory, Strategy, Singleton)

Cloud & DevOps

- Microsoft Azure (AZ-900 Certified)
- Jenkins CI/CD
- GitHub/GitLab
- Postman
